Continuation of 13. Other: Applicant asserts the argument that the combination of Levy and Wynblatt fails to disclose the feature of "the connection being independent of the search server." See Amendment, page 3. The Examiner respectfully disagrees. Wynblatt discloses a system wherein the client program downloads address of various data sources from a friendly server. See col. 4, lines 15-25. The client program then utilizes the downloaded data source address to send HTTP requests to download descriptive pages from the descriptive servers. See col. 4, lines 55-64. Thereafter, the downloaded descriptive pages are utilized in the application of a Value Function so that the preferred data stream may be selected. See col. 5, lines 50-65. Wherein Wynblatt discloses the feature of establishing "a streaming connection using a standard protocol such as RTSP," it would have been further obvious to one of ordinary skill in the art that the session identifier used within for an RTSP connection (i.e. a client identifier) would read upon the recited claim limitation. Additionally, as Wynblatt discloses the transmission of a Value Function in the establishment of a streaming connection (i.e. a first identifier which identifies the streaming data item), it would have been obvious to one of ordinary skill in the art that Wynblatt would indeed read upon each and every claim limitation within the instant application.

Accordingly, the rejections under 35 U.S.C. 103 are maintained..
